Introduction

The eSight Reporting Module provides a number of standard report templates that may be run on an ad hoc basis.

The eSight report scheduler within the Reporting Module provides the ability to schedule reports for automatic production and distribution via email.

Report Templates

eSight Reporting provides a standard set of report templates which may be viewed on an ad hoc basis.

Depending on the report selected, certain parameters need to be entered in order to select the relevant company, site and date range to report on, for example.
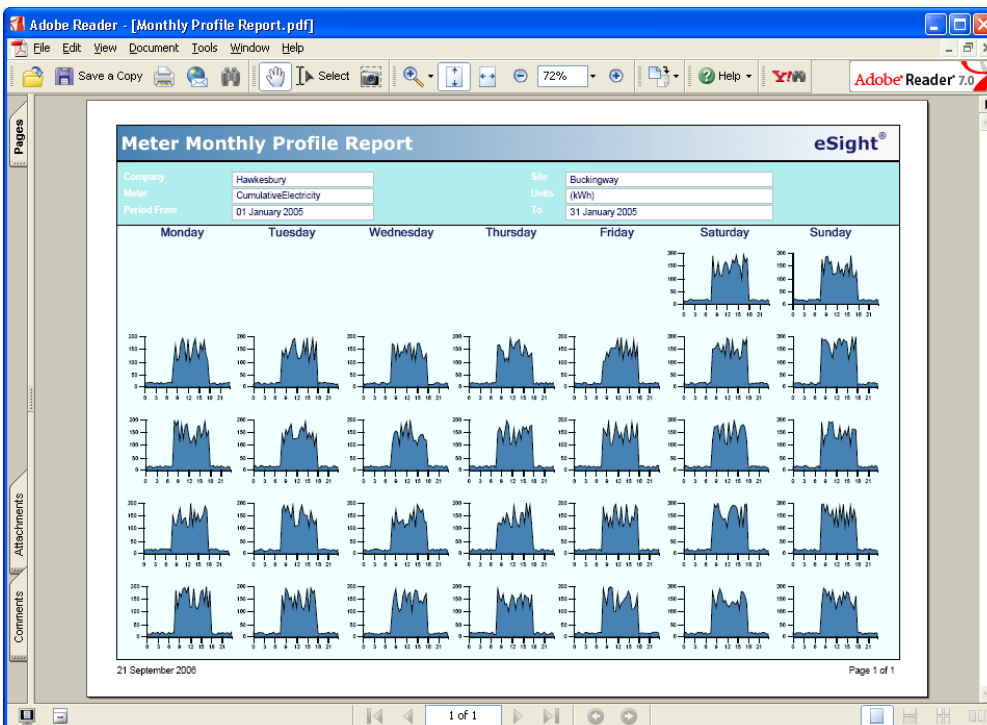

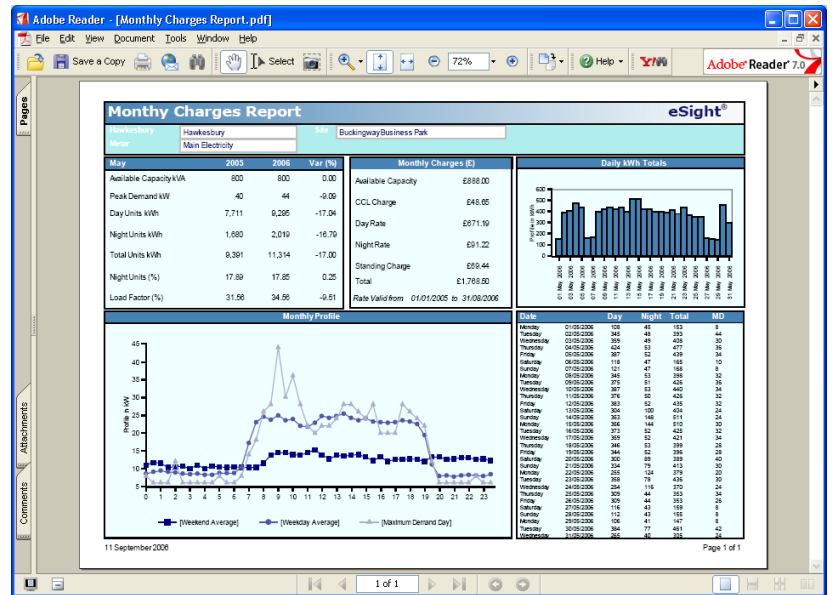

Report Scheduler

The eSight report scheduler enables the automatic production and distribution of reports via email.

Reports can be setup to output in a number of formats including graphs, tables or exports of data in a .csv format.

The report scheduler enables users to select how often the report runs and how the data is distributed.

The report may be automatically distributed via email and a copy can also be stored to a server location for reference.

New report templates may be configured using the eSight Report Designer (sold separately).

eSight Report Designer enables users to configure new reports and integrate these into eSight for viewing or automatic distribution at a later point.

Alternatively, eSight Energy also offer a service to design reports according to clients' bespoke requirements.

These could be single page reports or multiple pages containing features such as a table of contents, operational comments and sub reports for example.
